

# Algeria solar energy storage battery plant

## Overview

---

Algeria currently operates 23 battery energy storage systems (BESS) across solar farms, but wait - that's only 1. For a country receiving 3,000+ hours of annual sunshine, this storage deficit creates dangerous imbalances: Take the 120MW SKTM plant in Béchar. Algeria has fast-tracked its ambitious solar energy program, unveiling fresh details of a 3,200 MW solar plant rollout that is now moving into the equipment and installation phase. The project is part of a broader roadmap to expand the country's renewable capacity and reduce its reliance on fossil. With 84% of electricity still from fossil fuels [1], the country's racing against its 2035 target to install 15GW of solar capacity. But here's the kicker: without proper storage containers, those shiny new panels might as well be desert decorations. The Algerian Commission for. Algeria boasts some of the world's highest solar irradiance levels, with the capacity to generate between 1,850 to 2,100 kilowatts per hour and up to 3,500 hours of sunshine per year in its desert regions. By the end of 2023, Algeria had 437 MW of solar generation capacity installed, but the government has set a goal of reaching a production capacity of 4 GW by. The policy framework focuses on three pillars: The 80MW photovoltaic plant with 20MWh battery storage achieved: Recent updates to Algeria's Renewable Energy Law 2022-07 introduce: Combine storage solutions with existing infrastructure - many Oran projects retrofit old gas plants into hybrid energy.

## Algeria solar energy storage battery plant
