

# Are new energy photovoltaic panels selling well

## Overview

---

Many installers report that manufacturers and distributors are sold out of both domestic and imported modules through year-end 2026. As a result, we've downgraded our near-term residential solar outlook by 2% in 2025 and 8% in 2026. The US solar industry installed 11.7 gigawatts direct current (GWdc) of capacity in Q3 2025, a 20% increase from Q3 2024, a 49% increase from Q2 2025, and the third largest quarter for deployment in the industry's history. After several years of 30 percent annual growth in installations, 2024 saw a decline: fewer panels were installed in many. The U. As of September 2025, deployment numbers are soaring to new highs, yet industry players also face challenges like policy uncertainty, financing hurdles, and supply. Global PV Deployment • In 2024, between 554 GW dc and 602 GW dc of PV were added globally, bringing the cumulative installed capacity to 2. • The IEA. Contrary to earlier predictions of market saturation, photovoltaic panels are experiencing unexpected price increases across major manufacturers.
