

Are photovoltaic panels and solar street lights harmful

Overview

Solar-powered streetlights are a boon for the environment. By harnessing renewable solar energy, they operate without emitting harmful greenhouse gases or other pollutants, contributing to cleaner air and a healthier ecosystem. These systems use solar panels to convert sunlight into electricity, which is then stored in batteries or used immediately to power light fixtures such as LEDs. Little do people know that solar energy systems can be dangerous to their health, due to the EMF's emitted. Just one of scores of health impacts can be increased cancer risk. EMF stands for manmade "electromagnetic field (s)", such as produce unnatural electric, magnetic, or rf (microwave). Solar lights are an increasingly popular renewable energy solution, offering sustainability and cost savings. The system typically includes a solar panel, LED lamp, battery, and charge controller.
