

Battery cabinets must not be powered

Overview

The short answer is that OSHA (the Occupational Safety and Health Administration) mandates that you store batteries in a cool, dry, and well-ventilated area, separated by type, and with proper safety equipment readily available. Battery systems pose unique electrical safety hazards. The system's output may be able to be placed into an electrically safe work condition (ESWC), however there is essentially no way to place an operating battery or cell into an ESWC. Someone must still work on or maintain the battery system. Understanding the reasons behind these rules helps reinforce their importance. The existing wording was improved to clearly state that the b labeling consistent with the requirement of 70E.
