

CE certification for energy storage cabinet

Overview

The UL1973 standard, specifically designed for energy storage systems, ensures rigorous testing for thermal, electrical, and mechanical safety. Meanwhile, the CE mark opens doors to the European market, affirming compliance with health, safety, and environmental directives. The storage cavity energy containment rating (SCECR) forms the basis of the size of the fuel package, and the storage cavity with the largest SCECR is tested. Second, there is an internal deflagration test that exposes the product to ignition of a standardized flammable mixture inside the product.
