

Can solar power generation be used in industry

Overview

Solar energy can be used to generate heat for a wide variety of industrial applications, including water desalination, enhanced oil recovery, food processing, chemical production, and mineral processing, among many others. This can be done either through concentrating solar-thermal power (CSP). Over the years, the commercial solar system has become integral to business operations, including large industries. Increasing accessibility and affordability are among the most potential advantages an industrial solar power system can offer. Solar power doesn't just replace traditional energy sources—it redefines the way factories operate, combining advanced engineering with environmental responsibility.
