

# Can't solar power be stored

## Overview

---

This has led many people to ask the question: can solar energy be stored?

The good news is that the answer is yes. Solar energy storage captures and stores energy generated by solar panels for future use, especially during high demand or when sunlight is not available. Unlike fossil fuels, which are physical substances that can be stored and burned when needed, electricity must either be used immediately or converted into another form of energy to store it. Mechanical solar power storage works by. To address this issue, various methods of storing solar energy have been developed.
