

Canberra Portable solar container outdoor power

Overview

A complete solar-battery-generator power plant pre-built into a shipping container. We integrate the inverter/chargers, lithium batteries, DC charge controllers, switchgear, ventilation/air-conditioning, fire safety, and remote monitoring. Off-Grid power systems provide energy to locations where there is no electricity grid or connecting to the grid is either not practical or cost effective. They combine solar panels, inverters. This 120-watt solar charging system is great for those with minimal energy needs, like powering a few lights and a fan. Installs on your roof with corner brackets (hardware sold separately) and wires. Our Principle Manager Paul Coates has been an accredited installer since 2009, and an electrician since 1984. MyEnergy designs and builds turnkey off-grid systems inside 10-, 20- or 40-foot containers, pre-wired, factory-tested and ready to run the moment they land on site.
