

China's earliest photovoltaic panel power station

Overview

1983: China's first 10kW civil photovoltaic power station, which is also the oldest existing photovoltaic power station in China, was built in Xiaocha Village, Yuanzi Township, Yuzhong County, Gansu Province, providing domestic electricity for 130 local households. All of the modules, which range from 230 to 240 watts, are mounted at a fixed tilt angle of 38°. It is located in the Photoelectricity Park of Dunhuang City. This 10kW system, China's oldest operational photovoltaic array, powers a telling story about. Wind and solar surpassed a quarter of China's electricity generation for the first time in April 2025. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. [1]. Argentina Cauchari Jujuy Solar PV Project (315 MW) is the world's highest large-scale photovoltaic power station. During the first Belt and Road Forum for International Cooperation, under the witness of the heads of both China and. When did solar power start in China?

In 1989, China's first 10 kW.

China's earliest photovoltaic panel power station

OverviewHistorySolar resourcesSolar photovoltaicsConcentrated solar powerSolar water heatingEffects on the global solar power industryGovernment incentives

China is the largest market in the world for both

photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. By June 2025, China's PV capacity surpassed 1,100 gigawatt. In 2024, China added 277 gigawatts (GW) of solar power, which was equivalent to 15% of the world's total cumulative installed solar capacity.
