

China s first solar-powered communication cabinet battery

Overview

The report cites US energy officials and warns that comms devices—including cellular radios—have been found in solar inverters, which are used to connect solar panels to electricity grids, and solar batteries acquired from multiple Chinese providers. This discovery, first. A Reuters investigation, citing two individuals familiar with the matter, revealed that undocumented components were found during security inspections of inverters connected to the national grid. energy-sector forensic teams have begun disassembling Chinese-manufactured solar inverters and grid-scale batteries after discovering undocumented 4G/LTE modules and other wireless communication transceivers buried on the circuit boards, according to two people involved in the tear-downs. They are also found in batteries, heat pumps and electric vehicle chargers. These reviews are part of ongoing efforts by U. agencies to identify and mitigate vulnerabilities in imported energy technology. Solar inverters, which convert solar energy into.
