

# Compression Energy Storage Project Prices

## Overview

---

Compressed Air Storage Capex: BloombergNEF (BNEF) data from 2023-2024 highlights compressed air storage costs around \$293 per kilowatt-hour (kWh) of capacity in global averages, with some variation by geography and project scale. DOE's Energy Storage Grand Challenge supports detailed cost and performance analysis for a variety of energy storage technologies to accelerate their development and deployment The U. Project Scale: A 100 MW CAES facility typically costs 25% less per kW than a 10 MW installation. The objective of SI 2030 is to develop specific and quantifiable research, development. Our base case for Compressed Air Energy Storage costs require a 26c/kWh storage spread to generate a 10% IRR at a \$1,350/kW CAES facility, with 63% round-trip efficiency, charging and discharging 365 days per year.
