

Current controlled voltage source inverter

Overview

The current source inverter is responsible for converting the DC current from the PV panels into a controlled AC current. In the medium voltage adjustable speed drive market, the various topologies have evolved with components, design, and reliability. The two major types of drives are known as voltage source inverter (VSI) and current source inverter (CSI). This conversion is a necessity in nearly all modern power systems, bridging the gap between DC sources and AC loads.
