

# Domestic photovoltaic panel manufacturing

## Overview

---

This map provides information about all of the solar photovoltaic (PV) manufacturing facilities in the United States and how they contribute to the solar supply chain. Manufacturing Renaissance: US solar manufacturing capacity has grown 190% year-over-year in 2024, reaching over 51 GW annually—enough to meet nearly all domestic demand while creating over 33,000 manufacturing jobs across the country. Solar photovoltaic (PV) modules include many subcomponents like wafers, cells, encapsulant, glass, backsheets, junction boxes, connectors, and frames. When you buy American made solar panels, you also infuse the economy with money and support local jobs and companies. At GreenLancer, we. Domestic solar power generation has increased over the past decade, enabled by technological advances, government support, state-level policies mandating use of electricity from renewable sources, and improved cost-competitiveness relative to electricity generation from fossil fuels. This data is collected by Solar Power World editors and will be continually updated as facilities.

## Domestic photovoltaic panel manufacturing
