

Equatorial Guinea's telecommunications base station infrastructure

Overview

Equatorial Guinea's internet infrastructure is a mix of modern fiber optics and aging last-mile networks. The country has ample potential capacity due to multiple undersea cables supplying international bandwidth. Provide a Multi-mode base station with Software Defined Radio (SDR) RF modules in order to allow flexible deployment of new RAT technologies in the future and shorten the. A is located in Malabo, Equatorial Guinea. Since 2008, it has worked to improve the country's telecommunications. Created in 2011 by Presidential Decree, GITGE is responsible for managing and building Equatorial Guinea's telecommunications infrastructure. no AM, 3 FM, and 5 shortwave stations (2001). [2] The state maintains direct or indirect control of all broadcast media. This marked a significant turning point in the country's connectivity. Prior to this, the country's telecommunications infrastructure was largely limited to landlines and radio. Fueled by both the revenues from natural resources and the increased demands for power, roads, and harbors to continue the production of natural resources, the country has made large improvements in the vastly underdeveloped infrastructure.
