

# **Explosion-proof maintenance service for base station user cabinets**

## Overview

---

Our 60?

radial-arm drill makes short work of entries and taps for buttons, switches and bolts in the thickest explosion-proof cabinets, with pin-point precision and perfectly aligned holes. When you pick them up they'll be ready to receive your conduit and operators — right the first. As a critical safety equipment in hazardous environments, the daily maintenance of industrial explosion-proof cabinets directly affects production safety and equipment service life. If you want conduit entries drilled to your specifications you have two choices: Order them from the factory and wait six weeks, or drop them off at ACES where they'll be ready in. Increased safety is a simple concept, but there are many detailed requirements that must be correctly implemented to result in a safe installation! To comply with the certification, it is essential that Increased Safety enclosures are installed and maintained in accordance with the relevant. Regular maintenance of explosion-proof equipment is essential for several reasons: Here are some effective maintenance strategies for explosion-proof equipment: Regular inspections are crucial to identify any potential issues before they escalate. This involves checking for signs of wear and tear.
