

Global Air Energy Storage System

Overview

Compressed air energy storage technology is a promising solution to the global energy storage (ES) challenge. It offers high storage capacity, long system life, and clean operation. A pressurized air tank used to start a diesel generator set in Paris Metro Compressed-air-energy storage (CAES) is a way to store energy for later use using compressed air. This paper provides a comprehensive overview of CAES technologies, examining their fundamental principles, technological variants, application scenarios, and gas. The global compressed air energy storage market size was valued at USD 5.83 billion in 2024 and is projected to reach USD 35.
