

# How big an inverter can support 220v50hz

## Overview

---

Generally, it's recommended to size the inverter to 80-100% of the DC system's rated capacity. Before determine the inverter size, the most important thing is to calculate your average daily power consumption (kWh) and calculate your solar panel array size to match your power. We created a comprehensive inverter size chart to help you select the correct inverter to power your appliances. The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to. An inverter needs to supply two needs: Peak or surge power, and the typical or usual power. Surge is the maximum power that the inverter can supply, usually for only a short time (usually no longer than a second unless specified in the inverter's specifications). Standard 12v models top out around 3000w (24v/48v ~ 4000w). So you should factor this into your final number. I like to add a safety net of 20% for efficiency. So for the example above: 825 x 1.
