

How does a photovoltaic panel generate voltage

Overview

Through the photovoltaic effect, your solar panels produce a one-directional electrical current, called direct current (DC) electricity. These solar panel voltages include: Nominal Voltage. This is the maximum rated voltage under direct sunlight if the circuit is open (no current running through the. Solar PV panels are devices that convert sunlight directly into electricity using semiconductor materials. Sunlight is composed of photons, or particles of solar energy. The solar cell is the most critical component of a solar panel.

The movement of electrons, which all carry a negative charge, toward the front surface of the PV cell creates an imbalance of electrical charge between the cell's front and back surfaces. This imbalance, in turn, creates a voltage potential similar to the negative and positive terminals of a battery. Electrical conductors on the PV cell absorb the See more on [eia.gov](#)
