

# How heavy rain can photovoltaic panels withstand

## Overview

---

Cloudy and rainy weather does reduce solar panel output, but panels don't stop working entirely. Under light cloud cover, you can expect your panels to produce 10 to 25 percent of their rated capacity. From what I've learned, solar panels are built tough to. Solar energy is often seen as a robust and eco-friendly solution, but can it withstand the severity of natural disasters and harsh climates?

Solar panels in Gurugram and Noida are built to endure extreme weather, including winds up to 130 mph and hailstorms. Some weather helps your system perform better, while other conditions can temporarily reduce output or, in rare cases, cause damage.
