

# How high is the bottom of the photovoltaic panel from the ground

## Overview

---

For flat terrains, the panels are usually installed at a standard height of around 3 to 4 feet. This height is sufficient to allow for optimal solar exposure while ensuring easy maintenance and protection against debris. However, this can vary based on several factors, including the type of solar panel system, the local environment, and. Solar panel mounting height refers to the vertical distance between the ground (or the mounting surface) and the lowest edge of the solar panels in a ground-mounted or elevated solar array. it's looking like ground mounting may be a lot simpler and require less approval from the county. The system height is 8' (244 cm) with a depth of 11'10" (361 cm).
