

# How long can the locker facial recognition be stored

## Overview

---

**Fixed User Mode:** Suitable for companies, factories, and offices, allowing employees to bind their facial data for long-term use. Biometric smart lockers use technologies such as facial recognition, fingerprint scanning, palm vein mapping, and iris detection to ensure secure, seamless, and personalized access. In this article, we explore how biometric smart lockers are redefining security standards, the user benefits they. The smart face recognition storage locker solution utilizes facial recognition technology, replacing traditional paper notes, keys, or cards with the user's face as the credential for opening the locker. It is mainly composed of intelligent control components, biometric components, etc. **On-Device Recognition** Facial recognition is processed locally on the device, without uploading to the cloud. **Enhanced client experience:** Streamlines the storage process, making it more convenient and enjoyable for clients, avoiding the potential for losing keys or QR code, and hence enhancing their overall shopping experience.

## How long can the locker facial recognition be stored
