

How long does Saudi Arabia s solar power generation last

Overview

The kingdom experiences more than 3,000 hours of sunlight annually, making it an optimal location for solar power generation. Energy production varies throughout the year, influenced by seasonal changes and weather conditions. Saudi Arabia is located in the Arabian Peninsula, where it receives 12 hours of sun a day. [citation needed] As the largest oil producer and exporter in the world and one of the largest carbon dioxide. Saudi Arabia's solar power generation capacity is significant due to its geographic advantages and substantial investments. Current solar projects. Saudi Arabia, with an estimated 500 megawatts of renewable electricity capacity in 2020, aims to generate 60 gigawatts by 2030, primarily from solar photovoltaics and concentrated solar power. This ambitious target has attracted private sector solar projects with highly competitive bids. The Kingdom aims for 50% of its electricity to come from renewable sources by the decade's end. To achieve this, it has committed 705 billion riyals (around 188 billion US).
