

# How much do you know about compressed air energy storage power stations

## Overview

---

Energy storage air power stations are innovative technologies that leverage compressed air to provide an alternative means of energy storage. These facilities convert surplus electricity into mechanical energy by compressing air, enabling the storage of significant amounts of energy. Compressed-air-energy storage (CAES) is a way to store energy for later use using compressed air. At a utility scale, energy generated during periods of low demand can be released during peak load periods. [1] The first utility-scale CAES project was in the Huntorf power plant in Elsfleth, Germany. This technology strategy assessment on compressed air energy storage (CAES), released as part of the Long-Duration Storage Shot, contains the findings from the Storage Innovations (SI) 2030 strategic initiative.
