

Jfy on photovoltaic panel

Overview

□ Keep the whole surface of the photovoltaic panel covered with material opaque to solar radiation before connecting panel to equipment; this will ensure that no dangerous high voltage is present at the connection cables. □ This unit is designed to feed power to the public power. Page 4 www.com touch the heatsink at the back of the solar inverter or nearby surfaces while Inverter is operating. The inverter starts up automatically when DC-power from the PV strings is sufficient, and delivers power to the AC Grid when it is in normal operation. They are responsible for converting the direct current generated by PV panels into single-phase 230Vac 50Hz alternating current for delivery into the A ing frame through. There is a fuse in our units. For continued protection against risk of fire, replace only with same type and ratings of fuse. The replacement should be done by qualified service personnel. To avoid risk of electric shock, Do. Below you will find brief information for solar inverter JSI-1100TL, solar inverter JSI-1500TL, solar inverter JSI-2000TL, solar inverter JSI-2500TL, solar inverter JSI-3000TL. with positive and negative terminal not connected to the ground.
