

Lithium battery pack storage environment

Overview

Lithium-ion batteries should be stored in cool, moderately dry conditions away from direct sunlight, heat/flame-encouraging materials, and humid elements. When the lithium battery temperature is -20 to 5°C and there is an incoming charge current over 10 amps, self-heating can occur. For peak safety, maintain a 40% to 60% SoC in a cool, dry environment between 5°C and 20°C (41°F-68°F), avoiding any area prone to excessive heat or extreme cold. Best Temperature: 5°C to. Lithium-ion batteries have the characteristics of high energy density and long service life, and are accelerating the replacement of lead-acid batteries to become the preferred backup power supply scheme for data centers.
