

# Make a solar photovoltaic power generation system

## Overview

---

The references and articles below provide PV system basics, examples of the four common types of PV systems used to generate electric power, reviews of PV system components, lots on how-to build your own PV system, and a few interesting "other" PV systems. Building a solar generator is simpler than you think. It saves money and helps the environment. In this guide, you.

Photovoltaic (PV) solar electricity systems have captured a lot of interest as the system components have grown more mature, capable, and reliable. Solar panels, also called PV panels, are combined into. A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Sunlight is composed of photons, or particles of solar energy. Solar energy has become increasingly popular due to its affordability and sustainability.
