

Mexico city grid stabilization

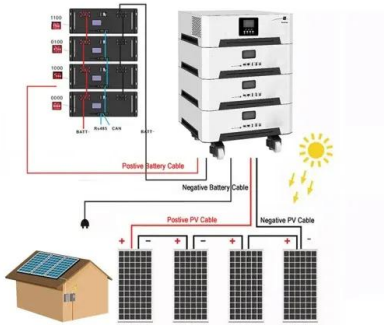

Overview

Mexico's power grid operator has rolled back a major structural reform aimed at dividing the country's main electricity system into two regional zones, citing critical risks to grid stability and market efficiency. In a resolution dated J, the National Center for Energy Control (CENACE). In the summer of 2025, Baja California, Mexico faced surging electricity demand from record heat and escalating grid constraints. Traditional infrastructure timelines were insufficient. The government will invest \$8. 2 B (MX\$164 B) to be invested between 2025 and 2030. The result: energy is being generated, but not delivered where and when it is needed. In March 2025, much of Cancún. How Can Mexico Strengthen Its Electrical Grid?

Energy attorney Regina Legorreta was featured in a Q&A with the Inter-American Dialogue's Latin America Advisor about strengthening Mexico's electrical grid. The package includes eight new secondary laws and amendments to three existing laws, implementing the framework laid out in Sheinbaum's.
