Inverter controls can be grouped into three categories: grid-following (GFL), grid-forming (GFM), and grid-supporting. GFL inverters are referred to as current control because the current is the physical quantity that is regulated. They need the grid voltage for operation. They are used to inject. According to preliminary estimates from the California Department of Forestry and Fire Protection (CAL FIRE), the recent Eaton and Palisades wildfires will be the most devastating wildfires in U. history as measured by several criteria (CAL FIRE 2024).
