This paper covers tools and approaches that support design up to and including the conceptual design phase, operational planning like restoration and recovery, and system integration tools for microgrids to interact with utility management systems to provide flexibility and grid. The Low Voltage Experimental Microgrid Laboratory (LVEM lab) at the FOSS Centre of the University of Cyprus (UCY) is a flexible and scalable microgrid testing, demonstration and R&D platform for smart grid and other advanced energy technologies. The is up for sale by Altia. This is a unique property in the heart of the capital, a true clean energy microgrids. However, geographical island sources (DERs) increases. While intentional islanding through microgrids can enhance res. At the GOFLEX demonstration site in Cyprus, the GOFLEX team aims at testing the microgrid case of a university, exploring the offered flexibility by the public sector testing. Venizelos Efthymiou Research Centre. Resilience, efficiency, sustainability, flexibility, security, and reliability are key drivers for microgrid developments. These factors motivate the need for integrated models and tools for microgrid planning, design, and operations at higher and higher levels of complexity.
