

Micronesia ecological

Overview

It is home to over 2, 100 islands in the Pacific Ocean and contains an extremely wide range of ecosystems, including mangroves, shrublands, coastal wetlands, open woodlands, tropical rainforests, cloud forests, and savannas. The Micronesia Challenge has resulted in significant protections of land and sea, benefitted local communities and inspired other nations to take similar action. In 2006, Micronesian leaders declared the Micronesia Challenge, an effort to effectively conserve at least 30% of the near-shore marine. Micronesia, a region comprising thousands of small islands scattered across the western Pacific Ocean, is renowned for its extraordinary biodiversity.
