

Optimal direction for photovoltaic panels

Overview

The best direction for solar panels is true south in the northern hemisphere, including the U. These orientations will allow for the most direct sunlight to hit your panels, which helps improve electricity generation and maximizes your electricity bill savings with solar. For example, true north aligns with earth's true axis rather than aligning with the. Proper solar panel orientation and solar panel direction allow your solar system to generate the most electricity throughout the day. However, factors such as roof slope and proximity to the equator may have some homeowners considering other directions (including north).
