

Photovoltaic and ground energy storage

Overview

Photovoltaics (PV) refers to the technology that converts sunlight directly into electricity using solar panels. Energy storage systems, on the other hand, store excess energy for later use, addressing the intermittent nature of renewable energy sources like solar power. Together, these. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one.
