

# Photovoltaic bracket production equipment maintenance

## Overview

---

Annual maintenance should include comprehensive inspections of mechanical and electrical connections, source circuit voltages and currents, battery electrolytes (if applicable), and the programming of charge controllers and inverters. This report is available at no cost from the National Renewable Energy Laboratory (NREL) at [www.nrel.gov](http://www.nrel.gov). National Renewable Energy Laboratory, Sandia National Laboratory, SunSpec Alliance, and the SunShot National Laboratory Multiyear Partnership (SuNLaMP) PV O&M Best Practices. With global solar installations projected to reach 350 GW annually by 2025, photovoltaic bracket forming machines face unprecedented operational demands. But here's the kicker: nearly 23% of production downtime in solar component factories stems from poorly maintained forming equipment, according to a new report. Operations and maintenance (O&M) is critical for keeping solar photovoltaic systems performing at their best over their lifetime. Regular maintenance ensures the efficient operation and longevity of photovoltaic (PV) systems. This includes checking inverters, charge controllers, PV.
