

# Photovoltaic panel connection wire disassembly

## Overview

---

Use the second solar connector wrench to clamp the connector base, then rotate one tool while holding the other still to complete the tightening of the solar connectors. Put the solar connectors into the middle holes on the tools, then press and pull the solar connectors. Disassembling photovoltaic solar wires involves several critical steps: removing the connectors, cutting the wires safely, and ensuring proper handling of the materials. Safety precautions must be strictly followed to prevent electric shock and injury. We show you how to use the MC4 and H4 a couple of different solar connector MC4 connectors at the end of each solar panel. When installed at a site, solar modules are wired together in series to form strings. Most modern photovoltaic systems for residential or portable use don't actually require much "wiring."
