

# Photovoltaic panel installation design paper

## Overview

---

This paper presents designing aspects and assessments of solar PV system based on field and actual performance. Photovoltaic (PV) systems (or PV systems) convert sunlight into electricity using semiconductor materials. It can also generate electricity on cloudy and rainy days from reflected sunlight. This paper gives brief overview about the project. It emphasizes the importance of selecting appropriate packaged systems. Having a solar system installed is a project because it involves a unique process of designing, acquiring, assembling, and evaluating the installation that must comply with legal and insurance requirements.
