

Photovoltaic panel price increase

Overview

Wood Mackenzie's October 2025 analysis confirms that PV module prices are jumping approximately 9% in Q4 2025, with further increases expected through 2026. It represents a structural market correction that will reshape solar procurement strategies. Solar manufacturers are facing rising cost pressure as silver paste now accounts for up to 30% of total cell production costs. China's VAT rebate reduction, polysilicon consolidation, and lower factory utilization are reshaping the market. To protect margins, lock in pricing early, diversify suppliers, and adopt high-efficiency HPBC and ABC modules. Smart. Solar module prices are set to jump by 9% in the fourth quarter of 2025 and rise through 2026, driven by a convergence of three factors, including Chinese government policy changes, Wood Mackenzie said on Thursday. Author: Martina Markosyan

After 18 months of low prices, module costs. dc of PV were added globally, bringing the cumulative installed capacity to 2. 2 TW dc • China continued to dominate the global market, representing ~60% of 2024 installs, up 52% y/y. • The IEA reported Pakistan's rapid rise to fourth place in annual global PV. A structural shift in global solar supply chains, driven by policy changes, market economics, and raw material trends, is set to push up the cost of solar panels and other key components in 2026. The clearest trigger point is 1 April 2026, when China, the dominant supplier of photovoltaic (PV).
