## Overview

---

Microcracks — small cracks in your solar panels — can get worse if you don't take care of them. You can use a laminating film, polyurethane or waterproof resin to make microcracks waterproof and keep them. Solar panels convert the sun's energy into usable electricity and are a primary component of solar energy systems. They're also the most vulnerable part when dealing with nature's elements. While not a common problem, it's one that may arise over time due to various factors such as thermal cycling, weather conditions, or improper handling. Hail, falling branches, electrical surges or water can cause cracked or broken solar panels. If that happens, follow these steps to get. Most solar cells will continue to produce a current even after they've been cracked.
