

# Price per unit for bidirectional charging of photovoltaic folding containers used in resorts

## Overview

---

Charger: 7 kW bidirectional unit; no panel upgrade; standard conduit.  
Installation: 8 hours; labor \$95/hour. 6 kW unit with energy. Buyers typically pay for bidirectional EV chargers and installation costs that reflect charger power, electrical work, and permit requirements. This guide provides practical pricing in. Superior Backup Power Economics: Bidirectional EV systems provide 3-7 days of home backup power at \$5,000-\$12,000 total cost, significantly undercutting traditional generators (\$8,000-\$15,000) and dedicated battery systems (\$15,000-\$25,000) while serving dual transportation and energy storage. These benchmarks help measure progress toward goals for reducing solar electricity costs and guide SETO research and development programs. Read more to find out how these cost benchmarks are modeled and download the data and cost modeling program below. Market analysts routinely monitor and report. This is the product of combining collapsible solar panels with a reinforced shipping container to provide a mobile solar power system for off-grid or remote locations. Unlike standard solar panel containers, LZY's mobile unit features a retractable solar panel unit for quick installation.
