

# Prices of solar power generation components

## Overview

---

Solar module prices in 2025 have stabilized after years of dramatic fluctuations, with global wholesale prices ranging from \$0.28 per watt depending on technology, origin, and regional market conditions. Data source: IRENA (2025); Nemet (2009); Farmer and Lafond (2016) – Learn more about this data Note: Costs are expressed in constant 2024 US\$ per watt. Global estimates are used before 2010; European market. Over the past 10 years, photovoltaic components have transformed from niche products to mainstream energy solutions. These manufacturing cost analyses focus on specific PV and energy storage technologies—including crystalline silicon, cadmium telluride, copper indium. Each year, the U. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help measure progress toward goals for reducing solar electricity costs. Table 1 includes our estimates of development and installation costs for various generating technologies used in the electric power sector.
