

# Principle of Energy Storage in Communication Base Stations

## Overview

---

Energy storage systems (ESS) are vital for communication base stations, providing backup power when the grid fails and ensuring that services remain available at all times. Including: 5G power, hybrid power and iEnergy network energy management solution. Why do 5G base stations need backup batteries?

As the number of 5G base stations, and their power consumption increase significantly compared with that of 4G. How to optimize energy storage planning and operation in 5G base stations?

In the optimal configuration of energy storage in 5G base stations, long-term planning and short-term operation of the energy storage are interconnected. Therefore, a two-layer optimization model was established to optimize. As global 5G deployments surge to 1.
