

# Relationship between solar container energy storage system and lithium

## Overview

---

Lithium-ion batteries play a pivotal role in solar energy storage by providing an efficient and reliable means to store excess energy generated by solar panels. This stored energy can then be used when sunlight is not available, such as during nighttime or cloudy days. A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to. The lithium-ion battery has the characteristics of low internal resistance, as well as little voltage decrease or temperature increase in a high-current charge/discharge state. It lets grid operators store abundant solar and wind energy for later use.
