

School energy storage australia

Overview

Battery storage is becoming the new norm in solar schools, with more than 130 facilities across the country adopting storage solutions, aiming to unlock energy and emission savings and build greater resilience for their school communities. Around 1,500 NSW public schools across the state have already installed 17 megawatts of solar energy systems. These systems are capable of generating enough energy to power 3,000 NSW homes, saving almost 17,000 tonnes of carbon emissions each year. But energy systems are rapidly transforming. Includes case studies on how to create change and information on how to link resources back to the curriculum. Administered by the Australian Association for Environmental Education.
