

Should the photovoltaic panels be fixed horizontally or vertically

Overview

Recommendation: Horizontal as the primary choice, vertical as a supplementary option. Most homes achieve better results with a horizontal orientation, especially when aiming to capture the most sunlight on the panels. However, vertical installation can also be effective. Solar panels can produce the same amount of power regardless of orientation. Still, you should be strategic with placement. Are you doing a solar project?

Modernize can pair you with three to four pros in your area, so you can compare options and save time and money. The two most common orientations are: 1.

Optimal Orientation for Solar Panels: Landscape vs. Portrait

To maximize energy generation, panels must be positioned at the right angle and direction based on location and weather data. Optimal power is harnessed when sunlight hits perpendicularly.
