

# Slope photovoltaic panel artifact

## Overview

---

Base slope effect describes the phenomenon observed in solar panels that are installed on sloping terrain. This refers to how the inclination of the ground influences the positioning and performance of the panels. Enter the photovoltaic mountain panel bracket artifact - the Clark Kent of renewable energy. With global solar capacity projected to triple by 2030, engineers are increasingly eyeing slopes for PV installations. The PV panel slope produced 27 %-63 % less soil erosion than the control slope.
