

Solar energy storage dual power supply system

Overview

A solar dual power supply system integrates solar energy generation with an alternate energy source, such as the grid or a generator. This combination allows for enhanced reliability, efficiency, and sustainability in energy provision. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. The reason: Solar energy is not always produced at the time. The answer is yes—and in today's energy landscape, having a system that integrates multiple forms of storage is not only possible but highly beneficial.
