

# Solar integrated power storage

## Overview

---

A photovoltaic energy storage integrated power station is a power station that combines photovoltaic power generation and energy storage systems. Sometimes two is better than one. The reason: Solar energy is not always produced at the time. Against the backdrop of global energy transition and the increasing awareness of environmental protection, integrated solar storage and charging stations have emerged alongside the development of solar energy and electric vehicles. Leverage the adjustability of the load-side assets.
