

# Solar inverter low voltage terminal wiring

## Overview

---

3kW inverters - Use a 03/16" (5mm) straight flat-blade screwdriver to connect the wires to the appropriate spring-clamp terminals, according to the label on the terminal blocks. Verify that there are no unconnected wires. For the CTO: Incorrect wiring leads to significant voltage drop and data inconsistencies, undermining system monitoring and performance analytics. This compromises long-term energy yield forecasts and asset management strategies. The wiring process begins with the connection of the solar panels. The grounding terminal accepts a wire size of 6-14 AWG, and must be sized for equipment grounding per NEC 250. Each PV panel plugs into its dedicated inverter. You can connect up to 15 inverters in a row just plugging one into the next.
