

# Solar panels anti-corrosion roof

## Overview

---

Choosing solar panels made from corrosion-resistant material is crucial. Not only are they highly resistant to corrosion, but they're also more likely to withstand natural disasters. When designed, installed and maintained properly, solar photovoltaics (PV) systems can be successfully placed in these challenging locations. Materials utilized, such as glass and aluminum, resist rust and degradation. Design features help minimize water accumulation and damage. Environmental impact is lessened due to reduced exposure to. A solar energy system is a significant long-term investment, designed to operate for 25 years or more.
