

# Solar panels for rural households in Myanmar

## Overview

---

Up to the 2024–2025 financial year, a total of 474,077 household solar systems and 136 small-scale power supply systems have been implemented, providing electricity access to 10,511 villages and 517,534 households. In some regions, where there are fewer rainy days, it will be possible to successfully generate electricity using solar energy. Just as the government is implementing various electricity generation projects, entrepreneurs from the private sector can also establish small-, medium-, and large-scale. U Htike tends to a solar “mini-grid” that produces electricity 24/7 for every family in the Kan Byin community. And U Htike and other local technicians have gained some valuable new skills along the way, learning how to install and maintain a solar mini-grid that will provide reliable, clean energy. However, residential solar systems have gained significant popularity and widespread adoption since the year 2022. The domestic market has experienced a notable. Demand for energy has been growing fast, in parallel with the ASEAN (Association of Southeast Asian Nations) member's economy, and solar energy is competing against a variety of conventional, as well as alternative low- or zero-carbon, energy resources for its share of Myanmar's energy mix.
