

Solar photovoltaic panels steal electricity

Overview

This article looks at six ways how to protect solar panels from theft, from locking fasteners to advanced CCTV systems. According to the International Energy Agency (IEA), global solar photovoltaic (PV) capacity has been growing at an average annual rate of around 33% over the past decade. This rapid expansion has brought about a corresponding rise in the number of solar panel installations, both residential and. According to Spotter Global, theft from solar farms was expected to rise throughout 2024, with growing demand for panels making them both easier to sell and more valuable to steal. This certainly seemed to be the case, as between January and August 2024, there were at least 70 reported offences. Solar panels represent a valuable investment and like any such investment, care must be taken to protect them from theft. Unfortunately, this is often easier said than done. Solar panels have now become the new hot commodity to own. A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. These photons contain varying amounts of.
